

CENTRAL OHIO - HIGH SCHOOL TENNIS COURT COMPARISONS

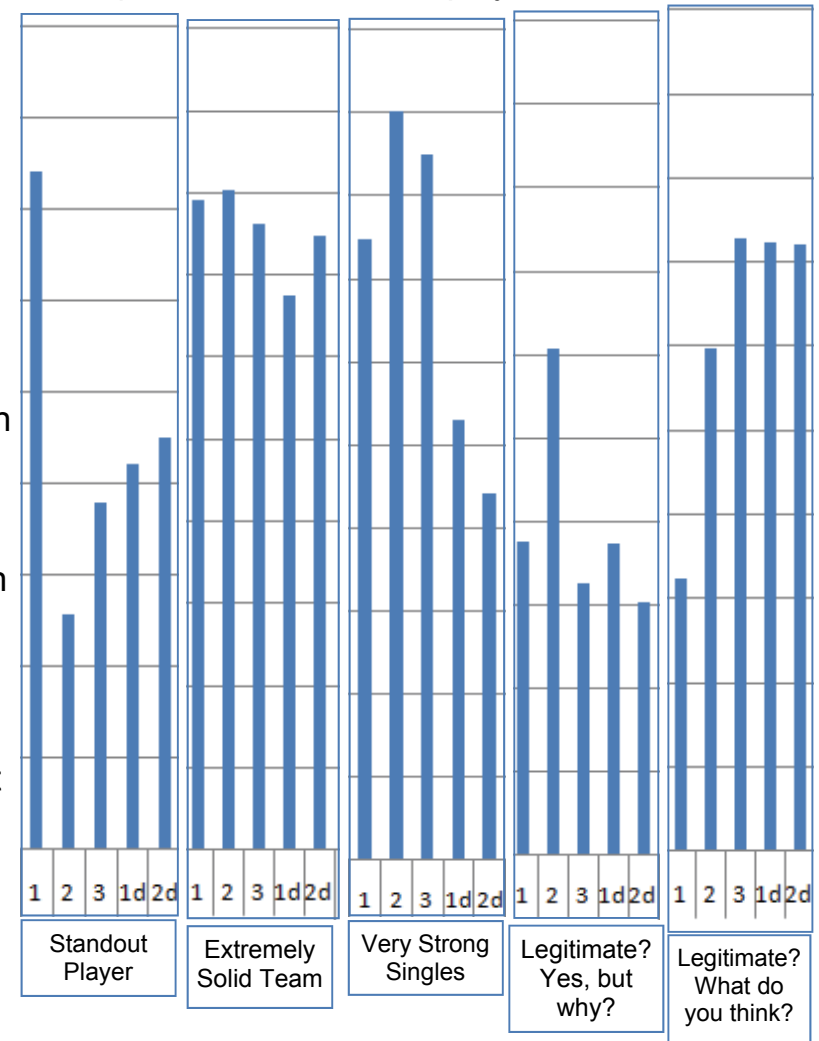

CREATED BY SCOTT GERBER - GERBER ANALYTICS, LLC

After the Boys 2009 season, there was considerable interest in the court placement of various players on several teams. This document provides readers with the performance of each court (i.e. 1st singles, 2nd singles) for the prominent tennis teams in Central Ohio for the 2006-2009 seasons and for the girls in 2008.

While these charts are “after the fact”, this document may help confirm or validate some of the concerns or questions that some coaches and fans may have had.

Each bar in the following charts represent the game winning percentage of that specific court position. For example, if a player on court one wins a match 6-3, 6-3, then his game winning percentage would equal $(6+6)/(6+3+6+3)$ or 66%. These numbers have been accumulated for the entire season for each court (not by that specific player). These numbers are also only included when a specific position is identified. Therefore, Sectionals, Districts, and numerous tournaments are not included because court one, court two, etc. players were not readily apparent.

Obviously the court 1 singles player must be better than the court 2 player, who must be better than the court 3 singles player. However, if a court 2 player is having considerably more success than a court 1 player, then it is worthwhile to look closer at a graph. Samples of the various graphs are included to the right. The percentages have been removed on the samples but they

are included on the following charts.

As you look at these charts, it will become apparent who the standout players were for the various teams each year. To jog your memory, some of the top players are included for each year.

Please note that I plan to add to this document over time and I might also create it during the middle of the season if anyone thinks that I should. . .

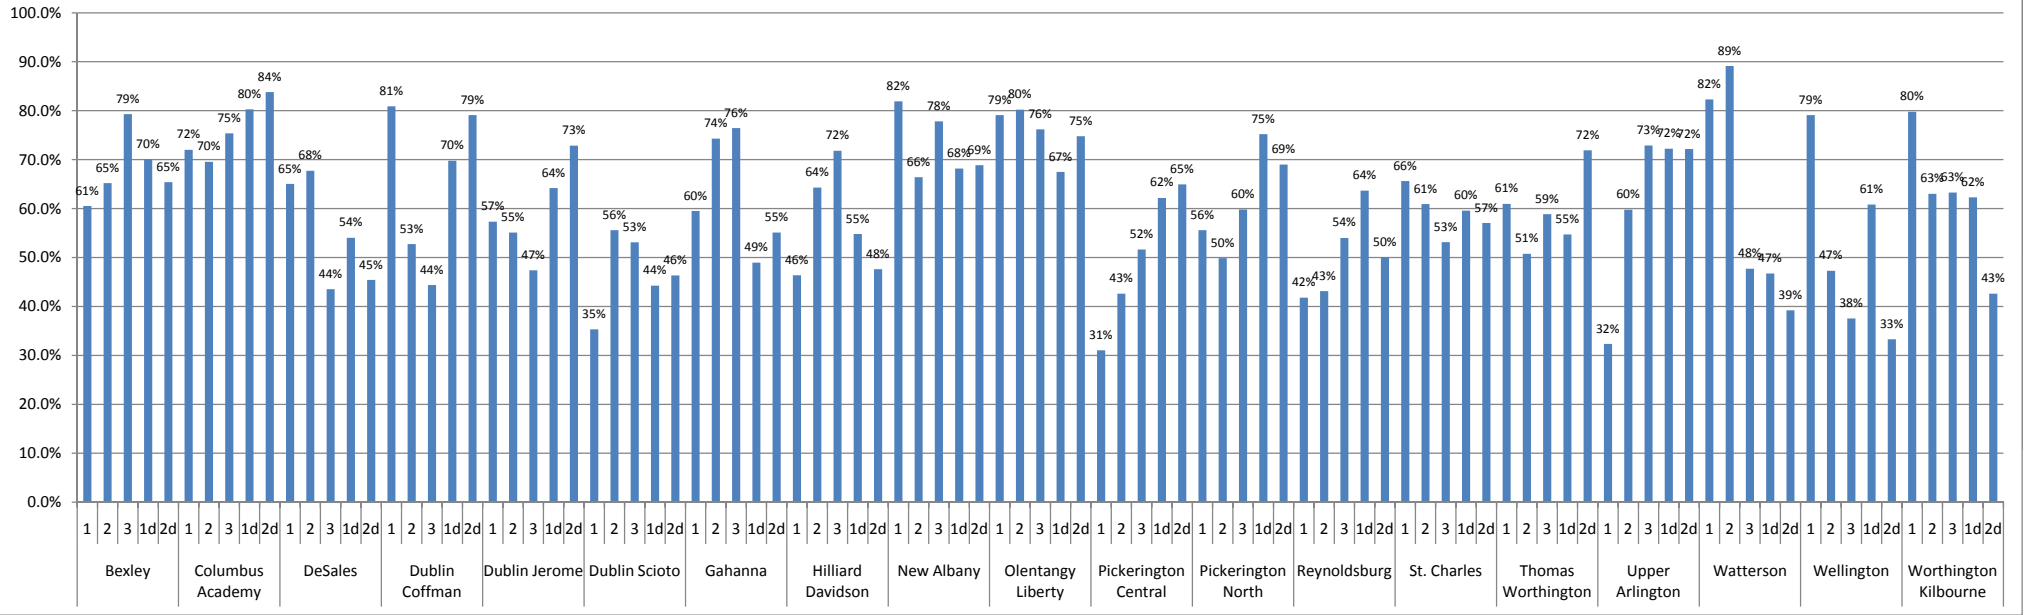

To the first three people who guess the teams on the first page, I'll buy you a \$4 OSU water at Girls States.

As normal, please contact me with any questions.

Regards,
Scott
